I am Parag Bokde (he/him) and I have nearly 3 years of working experience as a software engineer. I am a programming enthusiast having keen interest in software development, problem solving and Machine Learning. I have honed my skills throughout my working experience by solving problems related to tech and real life scenarios.

WORKING EXPERIENCE

MERN Stack Developer, Quest Global Technologies

11/2024 – Present

Achievements

Remote

- **CryptoGhost.ai:** Built a high level crypto insights platform including information related to tokens, traders, whale alerts, etc. while integrating various blockchain APIs like Moralis, Tokenview, Coinmarketcap, and so on. Additionally, integrating Stripe for payment and Leaddyno for affiliation.
- **Tiva Rewards:** Created a rewards platform for Intiva Health where the licensed practitioners get TIVA tokens as rewards. The tokens could be transferred or withdrawn anywhere. Created an admin webapp too for platform monitoring. Integrated a magic link (signed url) flow to make the platform login automatically.
- **ADF Exchange:** Helped build an exchange platform for a variety of tokens including features like Market traders, Limit trades, P2P transfer, deposit and withdraw to a wallet, many more. Integrated Moonpay for deposit and withdrawal from credit cards directly.

Software Engineer, Roxiler Systems

05/2024 – 10/2024

Achievements

Pune, India

- **Whatsapp Review System:** This project aimed at scanning a QR Code which would direct customer to a few review questions within our Whatsapp account. My main task here was managing the analytics/dashboard part where the brand owner can view all review related analytics in one page.
- Other projects I worked in involved creating a data table and implementing advanced list virtualization for our clients.

MERN Developer, Techisor

07/2023 – 04/2024

Our main project is developing a CRM where I am currently leading backend team.

Bengaluru, India

Achievements

- Website migration: Initially, I helped in migration of company's main website <https://niveshartha.com> from Reactjs to Nextjs rendering pages using SSG, generating new metadata for each page, improving SEO and performance of the website.
- Dedicated CRM project:: Contributed as lead backend developer in development of the CRM Togile (<https://togile.com>). The CRM is built on top of NextJS, ExpressJS and MongoDB. We included most of the features expected of a functional CRM such as Leads, Deals, Contacts, Companies Management, Routing Engine, Automation, Products Management, with the mentioned features contributed by myself.

SKILLS

Websockets

Programming Languages

Javascript, Typescript, Python

Docker

Machine Learning

Pytorch, Tensorflow with Keras

Backend Development

NodeJs, ExpressJs, Bun + Elysia, Serverless

Frontend Development

ReactJs, NextJs, SolidJs

Database

MongoDB, MySQL, PostgreSQL, Redis

Projects

AI Models, *Email spam detector, sentiment analyzer, more to come*

This project includes things I have learnt and practiced to understand ML Engineering
